Conflict Resolution Cheat Sheet

Merge conflicts are not uncommon when working in a team of developers, or on Open Source Software. Fortunately, GitHub has some good documentation on how to handle them when they happen:

- https://help.github.com/en/github/collaborating-with-issues-and-pull-requests/about-merge-conflicts
- https://help.github.com/en/github/collaborating-with-issues-and-pull-requests/resolving-a-merge-conflict-using-the-command-line

You can also use git rebase branchname to change the base of the current branch to be branchname

The git rebase command is a lot more powerful. Check out this link for more information.
